Product appearance and specifications are subject to change without notice

CO₂ Incubator HCP-80/168/258

Product Features

- Uniform and Stable Temperature
- Precise CO₂ Concentration
- 180°C Dry-heat Sterilization
- IoT APP Available for Real Time Monitoring (optional)

• CO2 Incubator

Haier Biomedical IoT enabled CO2 incubator with 180°C dry heat sterilisation provides a safe, reproducible growth environment for cell cultures.

IR Sensitive Control of CO₂ Concentration

The new IR sensor with high temperature resistance of 190°C is based on the NDIR measurement principle and uses a silicon MEMS transmitter to replace the traditional light source. It can withstand more than 300 dry heat sterilization cycles with a service life of up to 15 years and control accuracy of ±0.1%. German IR infrared sensing technology. zero drift, without need for calibration, drift less than 0.3% within 2 years.

With six-sided heating based on fuzzy PID control, it has internal dual PT1000 high precision sensors. **304 Stainless Interior**

Adjustable Feet It can be double stacked

Inner Door It ensures the sealing inside the cabinet.

time. 15 years of data can be exported via USB. **Outer Door**

7-inch Touchscreen

It displays CO₂ concentration

and temperature data in real

The heated outer door prevents the condensation of the inner door

Internal Partition Safety anti-slip design of pull out shelves.

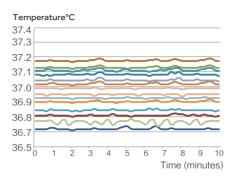

180°C Dry-heat Sterilization

All internal components do not need to be disassembled and do not need separate autoclave sterilization to prevent secondary pollution. Do not need consumables, one-click sterilization. German INFRARED CO2 sensor, NDIR light source technology drift < 0.3% within two years. It can withstand sterilization at 180°C with no disassembly and no manual calibration.

Precise and Accurate Temperature Control

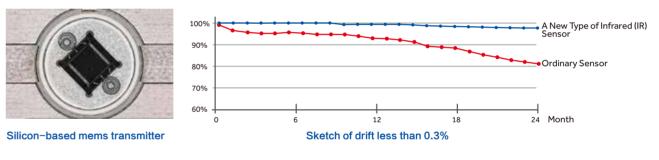

Controls the temperature precisely, within ±0.1°C, with six-sided heating based on the fuzzy PID control principle, to provide a stable temperature to ensure the normal growth of cells throughout their life cycle.

Uniformity of 27 measuring points <±0.3℃

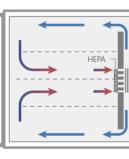

Precise CO₂ Concentration Using New IR Sensor Control Technology

Haier Biomedical's new IR Sensor technology uses NDIR measurement principles and withstands high temperatures of 190°C. The silicon MEMS transmitter can carry out more than 300 dry heat sterilization cycles to extend the service life to 15 years. Built-in temperature and humidity compensation technology reduces the impact of changes of humidity and temperature without the need for calibration after the high temperature sterilization. Five point calibration yields a higher measuring accuracy, sensitivity with less drift.

• Fast Environment Recovery for Optimal Cell Growth

Adopting active air flow control technology, based on the fuzzy PID control principle, the parameters can be restored without overshoot. After opening the door for 30 seconds, the temperature and CO₂ concentration can be quickly restored within 4 minutes. Even if multiple users share a CO₂ incubator and frequently open and close the door, the stability and uniformity of the incubator can be ensured.

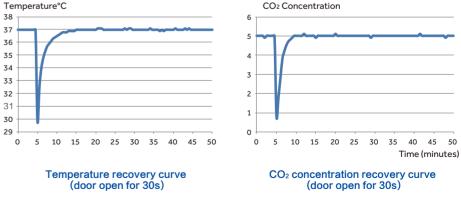

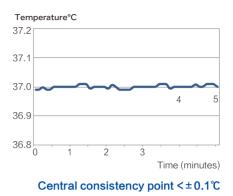

Illustration of purified airflow

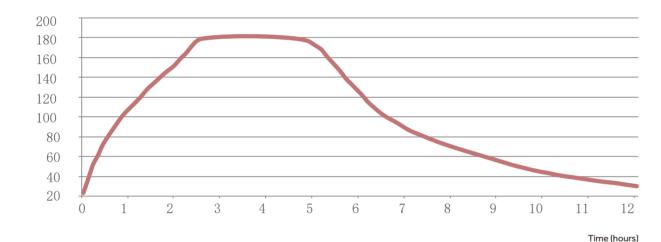

• 180°C Dry-Heat Sterilization Technology Minimises Contamination

Easy and effective sterilization of microorganisms including bacteria, fungi and microplasma with strong resistance, at 180°C high temperatures without the need for consumables. Simply press the "sterilization key" to activate and complete the sterilization process automatically in just 12 hours.

Delivers sterility level within the chamber of all surfaces to meet WS/T367-2012 standards.

All components are sterilized during the process, there is no need to dissemble internal components (including CO₂ sensors) and decontaminate separately, thus avoiding secondary pollution.

Temperature°C

Sterilization Temperature Profile

Forty-seven points were tested in the working chamber, including glass inner doors and partitions. All regions reached 180° C and maintained for 2 hours.

• High Efficiency Microbial Filter

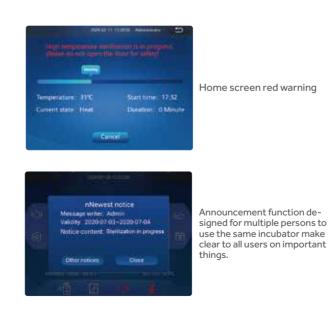

The CO₂ inlet is equipped with a high-efficiency microbial filter, with 99.99% filtration efficiency for particles larger than or equal to 0.2 μ m in diameter. It can effectively filter bacteria and dust particles in CO₂ gas line to ensure the safety of experimental results.

• Easy to Clean Interior

The working chamber is plasma electro polished, stamped stainless steel with wide-arc, laser welded corners. Bracketless shelving design ensures is quick and easy to clean.

O Interactive Intelligent Display with Easy Touch Operation

Touch-sensitive screen with rapid sensing even in rubber gloves. Green indicates normal operational parameters while a red warning display indicates abnormal making it easy to view data at a glance. A red warming display and audible buzzer will alarm when water level is low.

Real-time display of operation data real-time display of temperature, CO₂ concentration and O₂ concentration, and the data during the culture cycle can be viewed at any time.

Operation mode clear management authority: three-level of authority to ensure the security of data.

• Realtime Monitoring via Optional IoT Module

IoT module with multi-screen interaction, provides real-time upload of set parameters, operation parameters, operation curves, records and event records through the IoT cloud platform. The operation of incubator can be monitored anytime anywhere through mobile APP or computer terminal. The alarm function and service function are available with just the touch of a button.

• Anti-Condensation Heating System to Reduce Pollution Risk

The door on the CO_2 incubator radiates heat to the inner glass door, effectively preventing the glass door from forming condensation. The possibility of microbial contamination caused by the condensate water is eliminated.

Intelligent Control of Circulating Air Maintains Uniformity

Automatically adjusts the circulation of the air flow, optimising the air flow to avoid air volatilization of samples and ensuring proper uniformity throughout the chamber.

• Comprehensive Safety Alarm System

The system ensures the safety of experiments and processes by utilizing an independent temperature alarm system including a sound light and remote reminder. Other alarms include CO₂ concentration, door ajar and water shortage.

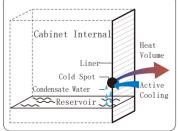

• Thoughtful Design with Attention to Details

Safe anti-slip design of pull out shelves.

Convenient drainage design

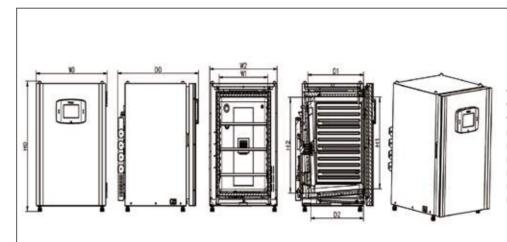

Active heat pipe condensation technology with condensate water directly return to reservoir.

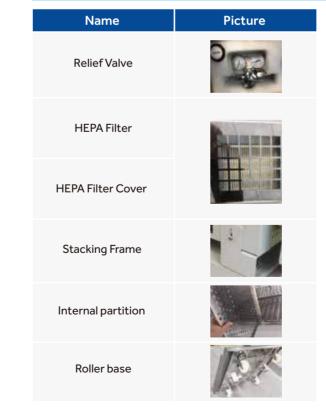

Data traceable for 15 years with large storage capacity and data exportable through usb.
